Dear Sir:

We, the president and directors of Warren Irrigation Company, agree and support the position of the EPA, that the application of a pesticide to waters of the United States consistent with all relevant requirements of FIFRA does not constitute the discharge of a pollutant that requires a National Pollutant Discharge Elimination System (NPDES) permit under the clean water act.

Our Irrigation Company uses, Mag H , a chemical to kill moss in our canal system. Mag H dissipates and some fumes go into the atmosphere. We would be unable to deliver water to our stockholders without periodically killing the moss plants in our canals. We have enough expense without adding the requirements and expense of a (NPDES) under the clean water act. We would appreciate it if you would consider these comments.

Respectfully Yours,

LaMar W. Skeen
Secretary and Director
